PROFESSIONAL SUMMARY

Results-driven Software Engineer with 2+ years of experience building scalable, secure, and automated **data solutions on AWS** at NICE Actimize. Recognized with the **CEO Award** for leading the enterprise Watch-AML Tableau to QuickSight migration. Skilled in designing ETL pipelines, serverless data orchestration, and BI dashboards using core **AWS services**. Strong foundation in data engineering, PySpark, and ML data preparation. Adept at writing clean, maintainable **Python** code and leveraging **Terraform** and Jenkins for infrastructure automation.

TECHNICAL SKILLS

Cloud & Data: AWS (Glue, Lambda, API Gateway, Step Functions, DynamoDB, QuickSight, S3, EC2, IAM, CloudWatch), AWS Architecture Design & Best Practices, Snowflake (familiar)

Programming: Python, PySpark, SQL

Agentic AI: LangChain, LangGraph, RAG, Vector Databases, Chunking Strategies, Prompt Engineering, Multi-Agent Orchestration

Concepts: AWS Microservice Architecture Design, ETL Design, Data Structures & Algorithms, Data Science Concepts, Operating Systems, Networking

Visualization: Amazon QuickSight, Tableau

Tools & DevOps: Terraform, Jenkins, Git

PROFESSIONAL EXPERIENCE

NICE Actimize, Pune

Feb 2023 – Present

Software Engineer

- Built a high-performance **PySpark-based data-flattening utility** in AWS Glue for an Anomaly Detection ML model, dynamically pivoting multi-dimensional time-series AML data (13–18+ months) from S3 and Athena. Optimized Spark execution for incremental flattening, improving scalability and reducing data preparation time for modelling.
- Designed and developed a robust **tenant-specific dashboard hosting framework** using Python, Terraform, Jenkins, and AWS services (Lambda, Step Functions, API Gateway, DynamoDB, QuickSight), enabling fully automated and scalable dashboard provisioning for multiple enterprise clients - reducing onboarding time from days to minutes.
- Led the **Watch-AML Tableau to QuickSight migration** initiative, reducing operational overhead and improving scalability by transitioning to AWS-native visualisation; collaborated with external vendors to ensure seamless integration and faster time-to-market.
- Contributed to **ML data preparation** workflows alongside the Data Science team, enhancing data availability, reliability and feature consistency for model training and testing - building strong familiarity with data science concepts and model lifecycle.
- Designated **Security Champion** for the engineering team - drove adoption of secure coding practices, led vulnerability triage, and raised compliance awareness across the organisation.
- Developed an **AI-SDLC agentic workflow** automating the end-to-end software development lifecycle using **LangGraph** and **LangChain** across four phases - Requirements (detailing, review, finalisation), Architecture (design, review, human-in-the-loop approval), Development (parallel Python, Terraform and QA code generation via a Project Management agent), and Quality & Docs (automated QA and documentation). Built a **RAG pipeline** over internal service code repositories and documentation using vector databases and chunking strategies, solving the context problem of existing service knowledge and coding standards for AI agents.

ACHIEVEMENTS

- **CEO Award** - Recognised for exceptional leadership, resilience, and ownership in successfully migrating Watch-AML dashboards from Tableau to Amazon QuickSight, managing vendor relations, and enabling faster time-to-market.
- **SPOT Award** - Awarded for outstanding contributions to AWS automation and dashboard modernisation initiatives.
- **Security Champion** - Drove adoption of secure coding practices, vulnerability management, and compliance awareness across the engineering organisation.

EDUCATION

Walchand College of Engineering, Sangli <i>B.Tech in Information Technology</i>	2019 – 2023 <i>CGPA: 8.40 / 10</i>
ANN Jr. College, Jaysingpur <i>Higher Secondary Certificate (Science)</i>	2017 – 2019 <i>Score: 85%</i>
